Projects

• Freshmate E-commerce Project:

- Responsive E-commerce website for ordering fresh coffee.
- Used the Node.js framework to develop a comprehensive API for retrieving all products, facilitating efficient data retrieval and management from MongoDB server.
- Implemented Angular for responsive design, delivering a dynamic product component with sorting & filtering. Created a responsive footer. All product features centralized within a single component for streamlined navigation.
- Developed using **HTML5, CSS3, Bootstrap, MVC Architecture, Angular Framework & MongoDB**.

- https://github.com/mostafa-fakhr/freshmate_back.git

• Instagram Clone Project :

- Project to emulate the core functionalities of the popular social media platform, Instagram.
- Developed a Laravel project following MVC architecture, creating migrations for users and followers and their relations.
- Created dynamic user profiles where posts are displayed alongside real-time follower/following counts.
- Enabled user interaction by allowing following/unfollowing users.
- Enhanced user profile with avatar, bio, gender, username, and website editing functionality.
- Developed using **PHP, Laravel, Eloquent ORM, MVC architecture, HTML5, CSS, Bootstrap**.
- https://github.com/mostafa-fakhr/instagram_clone.git

- **NorthStar Project :**

- A JavaScript e-commerce platform for clothes enthusiasts.
- Created the About Us page, featuring a carousel showcasing team members.
- Implemented dynamic personal information functionality, enabling users to view and edit details seamlessly.
- Utilized local storage for efficient user data retrieval and management.
- Developed using **HTML5, CSS, Bootstrap, JavaScript**.
